

Remote *IT GATEWay* Support & COMPLETE Three Year Warranty

One area of concern has always been how to best support and maintain your system and the potential burden on staff. Navigance has solved this by creating a remote Web-access to *GATEWay* through our “*Virtual IT Support*” service. The system is programmed to generate alerts to our support team who, in many cases, can resolve the issue online or if needed advise and dispatch local support with the exact problem. We further enhance the value of *GATEWay* with a complete 3 year warranty. This type of support is unmatched and a first in the industry and a key benefit to implementing the *GATEWay System*

.*GATEWay* Basic Standalone System

- Custom engineered cabinet w/ 6’ steel pedestal
- Intercom
- Keypad entry access
- Power supply w/UPS
- Panel lighting

GATEWay Options–

- Access Control - S2 Security System NetBox
- Video - Internal Color camera(s) w/ encoder
- Wireless Connection – Secure *WiFi*® Proxim System
- Prox Card Readers - HID iClass
- Biometrics - Bioscrypt fingerprint/ prox readers
- ID Badging - **NATA** Web-based *SKYGuard*™
- Expandable Pedestal - 6’ extensions for mounting Pelco Fixed or PTZ cameras and also area lighting package

GATEWay™

“The freedom to finally take control of your access”

*SETTING THE STANDARD FOR GENERAL AVIATION
SECURITY AND TECHNOLOGY*

Navigance is pleased to announce
the **NEW *SAFE GATEWay*™**

***The first complete access control entry system designed
specifically for General Aviation***

The First Complete Turnkey Entry System

The challenge facing General Aviation has been to find a fully integrated access system for gates with remote networking. **Navigance's GATEWay™** system accomplishes this by incorporating the required access functions with an entire array of other equipment options that encompass a tremendous variety of possible access gate and communication configurations.

From the basic needs of intercom and gate control to a suite of options offering multiple video solutions, selection of prox card readers, a unique expandable pedestal design for adding lighting with a PTZ camera if desired, and the key feature - our secure **WiFi®** wireless network. The first truly all-in-one complete, scalable entry system saves time and money due to preassembling and testing, so installation is quick and easy in days, not weeks. **National**

installation and project management is all arranged through GNISEC and their team of locally qualified professionals.

Access Control by S2 Security System

To provide a long term IP solution and avoid the obsolescence concerns, Navigance selected the S2 Security NetBox, a totally web-based access control system. This 3rd generation integrated system runs as a network device eliminating the need for a Server and takes advantage of the multitude of capabilities designed for today's IT networks. This embedded web server/software solution provides access control, video camera control, alarm and or temperature monitoring, and photo ID through a single interface. The wide range of features include automated alerts and alarms notifications via cell phone or email, SQL based reports, automated backups and remote access or support from any web browser. Plus, NetBox is fully integrated with the **SAFE** System and provides a complete interface with the Pelco video system allowing for a total view of your entire **SAFE System** network.

The **WiFi®** Wireless Solution by Proxim

Following years of R&D on wireless designed systems operating at two of the top GA Airports in the country, the Navigance team has developed **WiFi®**, a proven wireless solution using the next-generation and highly dependable Proxim line. The questions of security and connectivity over distance are no longer an issue. Proxim wireless products utilize Advanced Encryption System (AES) and proprietary (WORP) security. The systems can operate over distances of several miles. In addition, Proxim Wireless provides not only connectivity for the **SAFE GATEWay** system, it also **extends your LAN** to remote locations. All systems are engineered to easily handle high IP Bandwidth requirements.

"GATEWay comes with a full 3 year parts and labor warranty."
